

Here is a CD rack.

One rack holds 25 CDs.

David has 83 CDs.

How many racks does he need to hold all his CDs?

Lin has 6 racks full of CDs.

How many CDs does Lin have altogether?

How many CDs would you need to completely fill up 3 CD racks?

If I had 53 CDs, how many racks would I need? How do you know?

What is the question asking us to do? What is the operation/ How do we solve the problem? Can you explain it?

Prove it:

Dan has 67 CDs he knows he needs 2 racks. Is he correct? Explain.
