

## Maths 5 – example

Pictogram of how many different types of plants there are in my garden

Sunflowers								
Roses								
Trees								

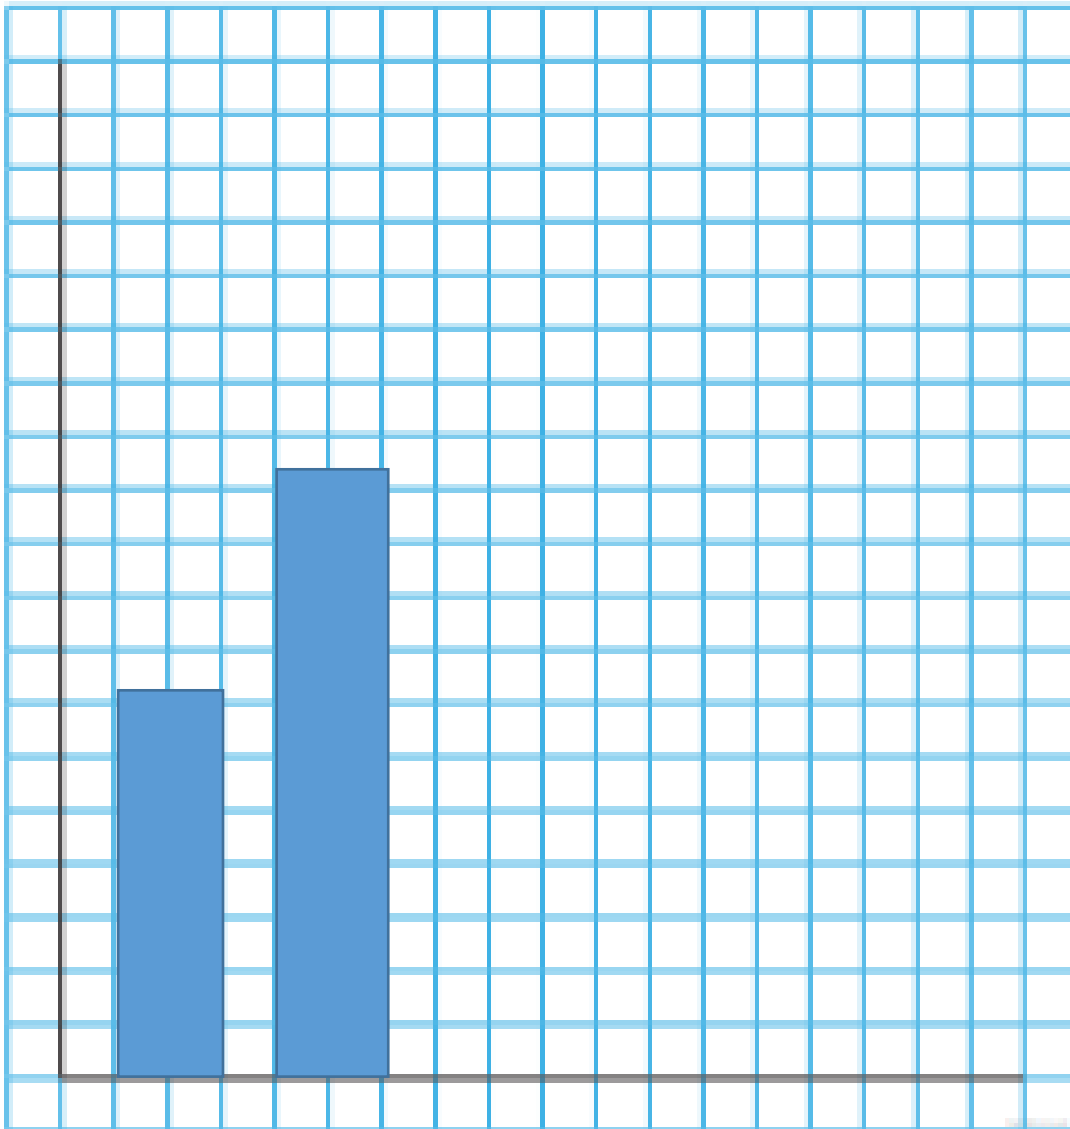

Scale (remember you can use a picture to represent more than one)

= 2

A bar graph to show \_\_\_\_\_

---

This bar chart can be used to show how tall different plants are. You can use a 30 cm ruler and choose maybe six different plants.

You child may not have ever made a bar chart before so this is an example, you will need to show them how to draw one in their Maths book using a ruler.

This Bar Charts need: a title, numbers for the height in cm's along the side and the plant names along the bottom.
