

Lesson 1

The first lesson of the week, we are looking at money and multiplication. Using a method of your choice, find the answers to the multiplication questions on Lesson 1, before moving onto the worded problems, use a calculator (or a phone with a calculator on) to check your answers. When solving the worded problems, please make sure you read the question fully first.

Lesson 2

When going out to a restaurant with friends and family, sometimes it is important to work out how much you need to contribute for the bill. To do this you will have to share the total amount of the bill out between the correct numbers of people. Using a method of your choice, find the total each individual has to pay for his or her meal on Lesson 2 worksheet. You may need to write your calculations down.

Lesson 3

Looking at the worded problems in Lesson 3, look at the questions and read them carefully. Before answering the questions, work out which operation you will need to use, some of them might need more than 1 step to find the correct answer.

Lesson 4 and 5

Using worksheet 4 and worksheet 5, carefully work through each column. The columns progress in complexity, with more thought needing to be put into the reasoning and problem solving. When reasoning, please ensure that you explain carefully and as thoroughly as possible. When problem solving, ensure you have read all of the question carefully before solving them.
